Summary

Computer Science graduate with strong interests in Artificial Intelligence, Machine Learning, and software engineering. Experienced in developing AI-based projects involving deep learning, computer vision, and data analysis, with strong problem-solving and programming skills.

Experience

Apprentice Software Engineer, Tech Accelerator Program (TAP) Sept 2026 – Present
IDLC Finance PLC (Onsite)

- Selected for IDLC's Tech Accelerator Program (TAP), a structured program focused on developing software engineering, system, and technology leadership capabilities.
- Contributing to the development and improvement of software solutions and technology-driven initiatives within the IT Division.
- Working with modern software engineering practices, collaborating with cross-functional teams, and gaining hands-on experience in enterprise technology and financial systems.
- Applying problem-solving and programming skills to real-world technical challenges while strengthening expertise in software development, system design, and engineering practices.

AI Data Specialist (Freelancer) Sept 2025 – Sept 2026
RWS Group (Remote)

- Annotate and label datasets to support AI and machine learning model development
- Ensure annotation accuracy and consistency to improve model performance
- Conduct quality checks and maintain high annotation standards

Skills

Softwares: Microsoft Word, Microsoft Excel, Microsoft Powerpoint
Programming: Python, C++, C, Kotlin, JavaScript, PHP, SQL
Libraries/Frameworks: TensorFlow, PyTorch, scikit-learn, pandas, NLTK, OpenGL
Concepts: Data Structures, Algorithms, Database Design

Projects

Game Catalog Web App: An interactive web interface where users will be able to track, record, and review the games they have played and are currently playing in lists

- Built a web platform to track and review games
- Implemented authentication, game lists, and filtering features
- Integrated MySQL database with PHP backend

Attention U-Net Tumor Analysis: A PyTorch implementation of joint segmentation and classification for medical tumor images using U-Net and Attention U-Net architectures, featuring dual-task learning and comprehensive evaluation tools

- Developed segmentation and classification models using PyTorch
- Compared U-Net and Attention U-Net performance

3D Fruit Ninja (Python + OpenGL): A fun and interactive game where you slice fruits with a sword while avoiding bombs! This game is built using Python and OpenGL to provide a 3D gaming experience

- 3D Gameplay: Experience a fully immersive 3D environment.
- Sword Mechanics: Swing your sword to slice fruits.
- Unlockable Swords: Unlock new swords as you score points.
- Pause and Restart: Pause the game or restart it anytime.
- Japanese-Style Environment: Enjoy a beautifully designed Japanese-style grid and walls.

Weather Prediction: Machine-learning pipeline for classifying weather types from tabular data

- Preprocessed dataset, engineered features, and trained multiple classifiers
- Evaluated models using accuracy, confusion matrix, and visualization tools

Education

Bachelor of Science in Computer Science
Brac University, Bangladesh
CGPA: 3.81

Achievements & Competitions

- Graduated with Highest Distinction Honor
- Python (Basic) certified by HackerRank
- Participated in INTRAHACTIVE 1.0 – Database Wizard Segment
- Participated in Bit Battles – Intra BRAC University Programming Contest
